# Background

- Housing policies dilemma in Pakistan
  - *Low cost housing for whom?*
  - *Missing participatory inclusive planning character*
  - *No consideration for the marginalized group of homeless people*
  - *Recently established shelter homes in urban areas*
- Housing policies not in line with the targets set under Sustainable Development Goals, 2030
- Higher Education Commission NRPU Project (9709/Punjab/NRPU/R&D/HEC/2017):
  - *“Multilocational householding: A study of homeless people in Lahore”*

# Introduction

- Ineffective and exclusive housing policies in Pakistan
- Rapid Urbanization
- Migration as livelihood strategy
- Housing shortage
- Inadequate access to amenities and services
- Homelessness in urban areas?
- SDG 11 calls for promoting access to adequate, safe, and affordable housing for **all** (United Nations, 2015)
- Homelessness; a range of definitions from minimalist to maximalist perspectives
- However, have not been adequately linked up with migration theory, thus a missing perspective of ‘multilocality’

# Causes of Homelessness

**Four main triggering factors**

**Inadequate Income due to:**

- Loss of Job
- High cost of living

**Social Issues**

**Domestic Violence**

**Health issues**

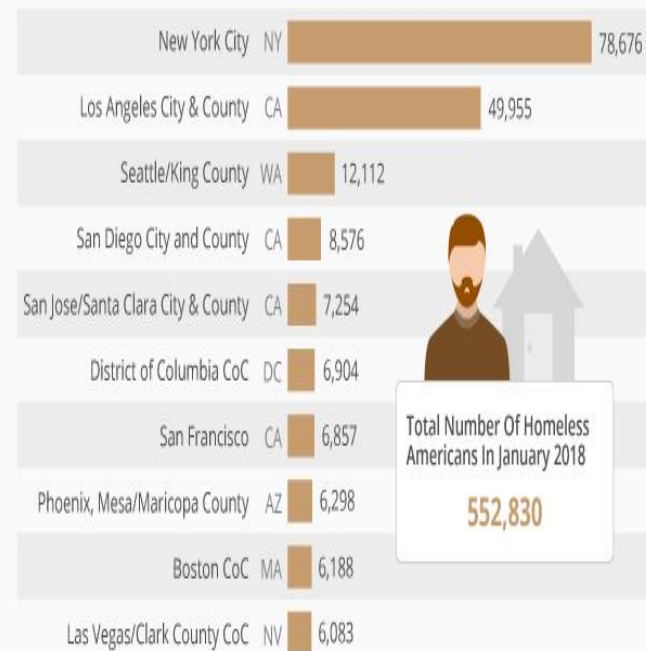

## Causes of Homelessness: Empirical Evidence

- In Germany, the two most dominant causes of homelessness have been reported as low-income and medical/health issues (Busch-Geertsema et al., 2020).
- In Pakistan, 91% of homeless people in Lahore have been found to be economic migrants (low-income driven initiative) (Aslam et al., 2021: unpublished; n=100)
- 18% of all homeless people in Shelter homes of Lahore reported medical issues for their homelessness (Hameed et al., 2022: unpublished; n=55)

# Some statistics of developed world's homelessness

## Rates of Street Homelessness

# Homelessness and Urban Health: The Vicious Circle

- The dominant associated factors with the health of urban people are:
  - *physical environment,*
  - *Social structures,*
  - *Access to social and health services (Galea & Vlahov, 2005)*
- Many urban homeless people are found to:
  - *live in unhygienic conditions,*
  - *Have a disconnected social life,*
  - *Have denied access to social and medical services due to not having valid identity documents.*

## **Homelessness and Urban Health: The Vicious Circle**

- The situation puts a toll on the physical and mental health of homeless people.
- Thus, it forms a vicious circle, where health issues act both as a cause and a consequence of homelessness, and if un-attended, the situation keeps on manifesting and exacerbating.

## Results of the Study

- Mixed-methods research approach (n=100)
  - *Random and convenience sampling*
  - *Face-to-face interviews of the homeless people in Lahore, Pakistan*
- 94% of the respondents were found living in unhygienic conditions along roadsides/medians and parks/open spaces.
  - *Susceptible to harsh weather conditions*
  - *Vulnerable to epidemics and diseases such as COVID-19 and Dengue*
- 90% of the respondents were found socially disconnected from their family members, living outside of Lahore (multi-locality character).
  - *A toll on their mental health*

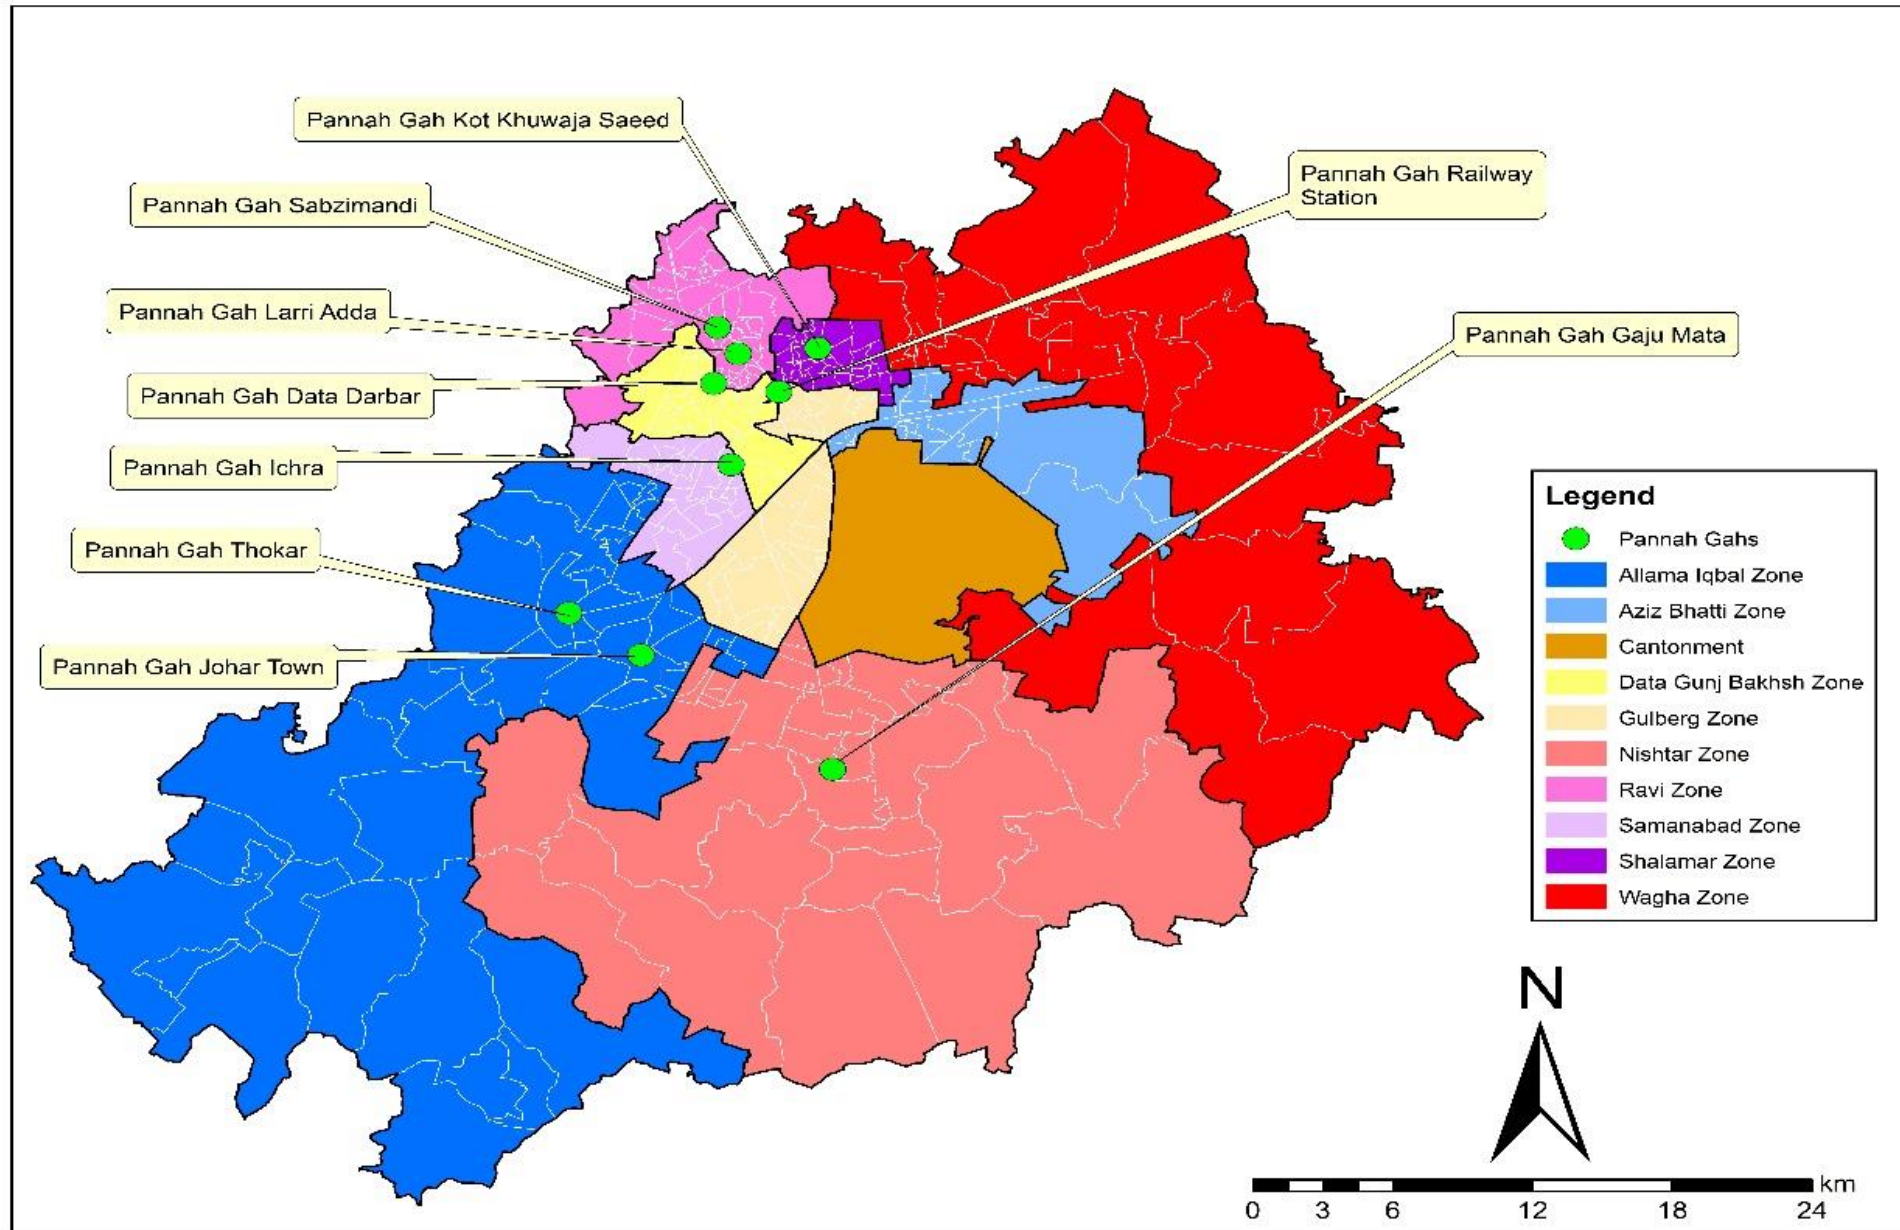

## Results of the Study

- Around one-third of homeless people were found not to have valid identity documents.
  - *Denied access to the government-established Shelter Homes (locally known as Panah Gahs) and other medical and social services.*
- A clue for endangered health of urban homeless people.

## Public Sector Support Program

- Panah Gah (Shelter Homes) initiative by the Government of Punjab in 2017
- Initially, 9 Panah Gahs were established in Lahore, 3 more have been added recently.
  - *Decent temporary living place with basic facilities such as beds, washrooms, clean water, food, and medical service.*
  - *However, having a Computerized National Identity Card (CNIC) (or at least a copy of it) is a must to avail the facility.*
  - *On average, 500 homeless people stay in these Panah Gahs daily.*
- A Panah Gah at all district headquarter cities across Punjab Province is planned to be established.

# Location of initial 9 Pannah Gahs in Lahore

## Public Sector Support Program

- The Punjab Panah Gah Authority Act, 2021
  - *Panah Gah is defined as a place for temporary shelter for shelterless*
  - *Shelterless means a musafir (traveler), a laborer or a destitute entitled to an overnight stay, or for an extended period determined by the Authority*
- Hence, a limited scope only.
- However, no bar is set yet on the number of times an eligible person may use the facility or switch in between.
- Government quest to collaborate with NGOs and philanthropist organizations for financial assistance, particularly the food (served twice a day)

## Private and NGO Sector Support Program

- Officials from following shelter homes run by NGOs and the private sector in Lahore were also interviewed:

Interviewed Shelter Homes				
Women Shelter Home	Edhi Homes	Roshni Home Trust	Agosh Orphan Care Center	Fraternity Old Age Home Pakistan
Pakistan Red Crescent	Edhi Center	SoS Children Village	Pakistan Street Home	baH Memorial Trust

## Private and NGO Sector Support Program

- The admission criteria of these shelter homes do not generally meet the situation of homeless people found in Lahore:
  - *The dominant majority of the occupants are females, children, and elderly people*
  - *Temporary sheltering space*

## Implications for Policy and Practice

- Updating the National Housing Policy for bringing inclusivity
- Homeless or economic migrants? Support to UN-HABITAT's (2014) assertion of homelessness as a phenomenon for households, rather than individuals
- Establishing job centers or linking with already established vocational training centers
- Increasing the scope and outreach of the public sector initiative of Panah Gah through proper centralized documentation
- Collaboration with NGO's based and private sector-run shelter homes for better coverage of homeless people

## Implications for Policy and Practice

- Being homeless is a planned way forward to a significant proportion of homeless people (29%) for having minimal living costs
  - *Any rehabilitation plan involving financial contributions from such homeless people may backfire.*
- Billbeds instead of billboards
  - *Private sector may be given public spaces along the roadside (may be under elevated mass transit lines) where the advertisement billboards may be converted into billbeds during night (a model already practiced by Master Moltyfoam in Pakistan)*
- Law enforcement agencies' role
  - *Should be supportive instead of harsh towards such homeless people*

## Implications for Policy and Practice

- Broader definition of household needed
  - *Pakistan Bureau of Statistics still uses the narrow definition of a group of people living together at a geographic place*
- Time-series data needed for deeper analysis of the dynamics of homeless people's life

## Transferable Implications for Ruhr Region-Germany

- Differentiation between homeless households and individual economic migrants
  - *In the wake of increasing natural and man-made crises across the globe (such as the Turkey & Syria earthquake, the Russo-Ukrainian War, Syrian crisis), the importance of this distinction is at an all-time high.*
- Linking up of homeless asylum seeker households with the job centers for their fast rehabilitation?
- NGOs-based and private sector-run “Heims”?
  - *Collaboration for better coverage of homeless households*
- Research on the “multi-locality” character of homeless people
